Current External Collaboration

We have:

- 8,234 pitching arm injuries (2018–2025)
- in-game pitch tracking in minors and majors (2017–2025)
- in-game biomechanics tracking in majors (2023–2025)

We've learned:

- non-fastball usage (esp. sliders) is associated with injury
- glove arm momentum is negatively associated with injury(!)
